(2) Novelty and Inventive Step[PCT Article 33(2) and 33(3)]

The present invention relates to a novel use of MADS-box gene having a nucleotide sequence set forth in SEQ. ID. No 1 or SEQ ID NO. 2 containing a region encoding MADS-domain for the regulation of fruit and seed development. It is shown that a transgenic plant which has been transferred with a expression vector comprising said MADS-box gene acquires a phenotype of regulated parthenocarp fruit formation as well as the development of fruit and seed.

D1 and D2 disclose a mads14 gene of SEQ ID No. 1 and mads 16 gene of SEQ ID No. 2, respectively. D3 discloses a MADS-box gene, MsMADS2 and an expression vector, a transgenic plant and the MsMADS2-mediated control of flower development. D4 discloses that MADS domain protein AGAMOUS-like 15 regulates expression of a gene encoding an enzyme involved in gibberellin metabolism. D5 discloses a MdMADS14 gene identical to a gene of SEQ ID No. 1 and a speculative role of said gene in fruit and seed development.

table(s) related to the sequence listing

b. format of material

on paper

in electronic form

c. time of filing/furnishing

contained in the international application as filed

filed together with the international application in electronic form

received by this Authority as an amendment* on _____

2. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed of furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

3. Additional comments:

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of:

Box No. V:

Claims 1, 6-10, 12-13 relate to a newly identified use of MADS-box genes, a transgenic plant whose fruit and seed development is regulated and a composition. Although the specific sequences referred in the above claims are already described in D1 and D2, the use of the genes as a regulator in fruit and seed development was not known or derivable in an obvious manner. Thus, novelty and inventive step can be acknowledged.

However, the subject matter of claims 2-5, 11 directed to an expression vector comprising said genes and a transgenic plant cell transformed with the expression vector according to claim 2 and a method of preparing a transgenic plant is considered to lack an inventive step, since an expression vector or a transgenic plant of a known gene is an obvious technical option for a skilled person in the art.

(3) Industrial Applicability[PCT Article 33(4)]

The subject matter of claims 1-13 is considered to be industrially applicable under PCT Article 33(4).
